

POPLIME LA LIQUID

(Liming Auxiliary)

POPLIME LA LIQUID is a liming auxiliary used for easier and effective dehairing and reduces the swelling of pelts.

SPECIFICATIONS

Appearance : Colourless or slightly yellowish liquid.
Chemicals Nature : Blend of amino compounds.

CHARACTERISTIC

Features : Solid content - approx 50%
: pH (1:10) - 10.5
: Does not contain Sodium Sulphide
: Miscible in all proportions with water.

PROPERTIES

Poplime LA Liquid reduces the lime swelling effect and diminishes the formation of wrinkles and drawn grain.

Poplime LA Liquid produces a clean and scudfree grain surface and the result is that very smooth, clean pelts are obtained.

With **Poplime LA Liquid** the dosage of Sodium Sulphide and Sodium Sulphhydrate can be reduced.

Poplime LA Liquid enables the chemicals employed in the liming process to penetrate through the leather skin more evenly. The result is that the pelts swell more evenly and the chemicals can be utilized more efficiently.

ADVANTAGES

The pelts are very clean and very smooth after they have been limed.

Growth marks, folds and blood vessels are much less prominent.

APPLICATION

Poplime LA Liquid is added undiluted before the application of Sodium Sulphide.

The dosage depends on the type of raw stock and the float length. It is usually sufficient to add 0.5-1.5% Poplime LA Liquid, expressed as a proportion of the salted weight.

STORAGE

Poplime LA Liquid has a shelf life of atleast six months if stored tightly in sealed packing at temperatures between 0°C-50°C
