

## POPFIX – L

**POPFIX L is a fixative specially developed for leather processing. It is a white free flowing powder based on inorganic compound, easily soluble in water at room temperature.**

### **ADVANTAGES :**

- More economical than other conventional fixing agents.
- Suitable as fixing agent for all classes of dyes (acid, direct, metal complex and combination) at same percentage as Formic Acid.
- Functions efficiently irrespective of the type of tannage or raw material .
- Compatible with other chemicals used in retanning , dyeing and fat liquoring .
- Effective fixing agent in all post tanning operations .
- Dye exhaustion characteristics are better compared to other fixatives .
- Provides better uniformity of colour, penetration , fastness and physical properties compared to other fixatives .

POPFIX L has 100% active numbers as against 85% in case of Formic Acid.

### **APPLICATIONS :**

- Follow Conventional dyeing process.
- Replace Formic Acid with POPFIX L in same proportion .
- Make 100% solution in water and ensure complete dissolution of material .
- Feed the solution in 2-3 equal installments at an interval of 10 minutes each .

**Without Gurantee**
