

POPSLIP SP POWDER

Slip Agent

TYPICAL ANALYSIS :

Appearance	:	Pale yellow fine powder
Chemical Type	:	Mixture of inorganic and organic compounds.
Active Matter	:	92% (± 2)
Storage Stability	:	Minimum two year under cool and dry conditions
Ionic Nature	:	Weakly Anionic
pH Value of 10% soln:	:	6.5 – 7.5

PROPERTIES :

POPSLIP SP POWDER: prevents entanglement and knotting as well as rubbing marks during production of leather in the drum and it also reduces risk of tearing.

POPSLIP SP POWDER: saves energy due to better gliding of pelts and leather in the drums.

POPSLIP SP POWDER: can be applied during pickling, tanning or retanning processes.

APPLICATION :

POPSLIP SP POWDER is recommended for the following processes:

- During short float liming, 0.4% together with liming chemicals
- During degreasing of sheep pickle pelts, 0.4-0.6% calculated on pelt weight.
- During neutralization, 0.3% calculated on showed weight.
- During retanning dyeing and fatiquoring, 0.3-0.5% calculated on shaved weight.
- During tanning with vegetable and/or synthetic tanning materials, 0.4-0.6% calculated on showed weight.

REMARKS :

The components of POPSLIP SP POWDER do not react with collagen. It can be easily washed off with water.
